

BUSINESS REQUIREMENTS DOCUMENT (BRD)

E-Commerce Implementation: Decoy Pricing & Influencer Matrix

Project: Fresh Dosa Batter Launch	Target Market: Lucknow, India	Base Product Cost: ₹90 / kg
Document Version: v1.0	Objective: Maximize 1kg Hero sales	Min Revenue Target: ₹100 / kg

1. OBJECTIVE & REGIONAL STRATEGY (LUCKNOW)

To transition fresh dosa batter from an occasional treat to a predictable **"Weekend Family Breakfast Ritual"** in Lucknow households. The website layout and cart mechanics must steer users away from low-margin trial pouches and visually force the selection of the high-margin 1kg SKU using strategic pricing asymmetry.

2. FRONT-END PRODUCT MATRIX & DECOY PRICING DISPLAY

The product catalog page must list all three variants simultaneously. The 500g variant serves strictly as a psychological decoy. The UI must visually accent the 1kg Hero variant using custom badges (e.g., "Best Value" or "Most Popular").

Variant Size	Display Price	Effective Rate	UI Styling & System Rule	Target Psychology
200g	₹45	₹225 / kg	Standard text, no highlights. Block coupon usage.	Expensive anchor; discourages continuous micro-buys.
500g (Decoy)	₹90	₹180 / kg	Standard text. Positioned immediately next to 1kg.	Creates an unviable comparison milestone.
1000g (1kg) ★	₹110	₹110 / kg	Bold text, green highlight border, "Best Value" badge.	Double the food of 500g for only ₹20 more. No-brainer.

3. CART RULES & COUPON CODE ENGINE REQUIREMENTS

- Influencer Tracking Codes:** Create an administrative backend to generate unique creator tracking codes (Format: `CREATOR10`).
- Discount Restrictions:** The validation engine must ensure codes apply a **10% discount exclusively to the 1kg SKU** (reducing it to ₹99, preserving the absolute minimum revenue floor of ~₹100/kg).
- Hard-Coded Block:** System must throw an error message if an influencer code is applied to a cart containing only 200g or 500g pouches: `"This coupon code is only valid for the 1kg Family Pack."`

4. AFFILIATE AFFILIATE MANAGEMENT & COMMISSION PAYOUT RULES

The backend affiliate ledger system must track sales attribution via cookie/coupon matches and enforce a tier-based payout structure to incentivize long-term consumer habit loop formation.

Purchased Variant	First-Time Payout	60-Day Retention Payout (Repeat Orders)	System Tracking Trigger
200g Pouch	₹0	₹0	Suppressed. No affiliate logging.
500g Pouch	₹5	₹0	Logs basic flat referral.
1kg Hero Pouch	₹15	₹5 per order (Valid for 60 days from first purchase)	Flags user profile to affiliate id for recurring loop.

5. CRITICAL FUNCTIONAL REQUIREMENTS FOR DEV TEAM

- **Onboarding Flow:** Affiliate sign-up dashboard must automatically trigger a manual warehouse dispatch notice for the "Creator Sample Bundle" (1x 500g pouch + 1x 1kg pouch) upon approval.
- **Analytics Dashboard:** Admin screen must show: Total Volume Sold (Kgs), Average Order Value (AOV), and Variant Conversion Split to monitor if 1kg sales stay above 75% of total orders.
